

n

m

1	3	5	7
10	11	16	20
23	30	34	60

target = 3

1 3 5 7 10 11 16 20 23 ...

Brute force \rightarrow to traverse & read the whole matrix
 $\hookrightarrow O(mn)$

Optimization \rightarrow to apply Binary Search on every single row
 $\hookrightarrow O(m \log n)$

Optimization 2 You can take extra space & store all the elements of the matrix in a $(n \times n)$ length 1d array.
& apply B.S. $O(n \times n + \log(mn))$

$\rightarrow \underline{O(mn)}$

space = $O(mn)$

Optimization 3

What if we can apply BS directly on the 2d array.

$m = 3$

$lo = 0$ $hi = 4$

	0	1	2	3
0	1	3	5	7
1	10	11	16	20
2	23	30	34	60

i

Search Space $\rightarrow \underline{\underline{O(\log_{mn})}}$

$[0, mn-1]$

$lo = 0$ $hi = 11$ $mid \rightarrow 5$

$lo = 0$ $hi = 4$ $mid = 2$

$lo = 0$ $hi = 1$ $mid \rightarrow 0$

$lo = 1$ $hi = 1$ $mid = 1$

$$row = (idx / n)$$

$$col \rightarrow (idx \% n)$$

Ex $\rightarrow idx = 6$

$$row \rightarrow \frac{6}{4} \rightarrow 1$$

$$col \rightarrow 6 \% 4 \rightarrow 2$$

leetcode 374

$n \rightarrow$ given value

B.S on ans

the final ans is going to

be b/w $[1-n]$

logical range of $[1 \text{ --- } n]$

ans

Search for the no. which has been picked

Search space \rightarrow $1-n$

-1
 0
 1
 \leftarrow x
 \leftarrow guess(x)

Brute force

to go to each and every value in the range $[1-n]$ &

check if we guessed the right no.

TLE

```
for (i=1; i<=n; i++) {  
    if (guess(i) == 0) {  
        return i;  
    }  
}
```

→ linear search

1 sec → $\approx 10^8$

How to optimize ??

search space

↓

$lo = 1$ $hi = n$
 while ($lo \leq hi$)

$mid = lo + (hi - lo) / 2$

if ($guess(mid) == 0$) return mid;

else if ($guess(mid) == -1$) $hi = mid - 1$

$O(\log n)$ → time
 $O(1)$ → space

else lo = mid + 1

>

leetcode - 441

$n \leq 10^9$

no. of coins

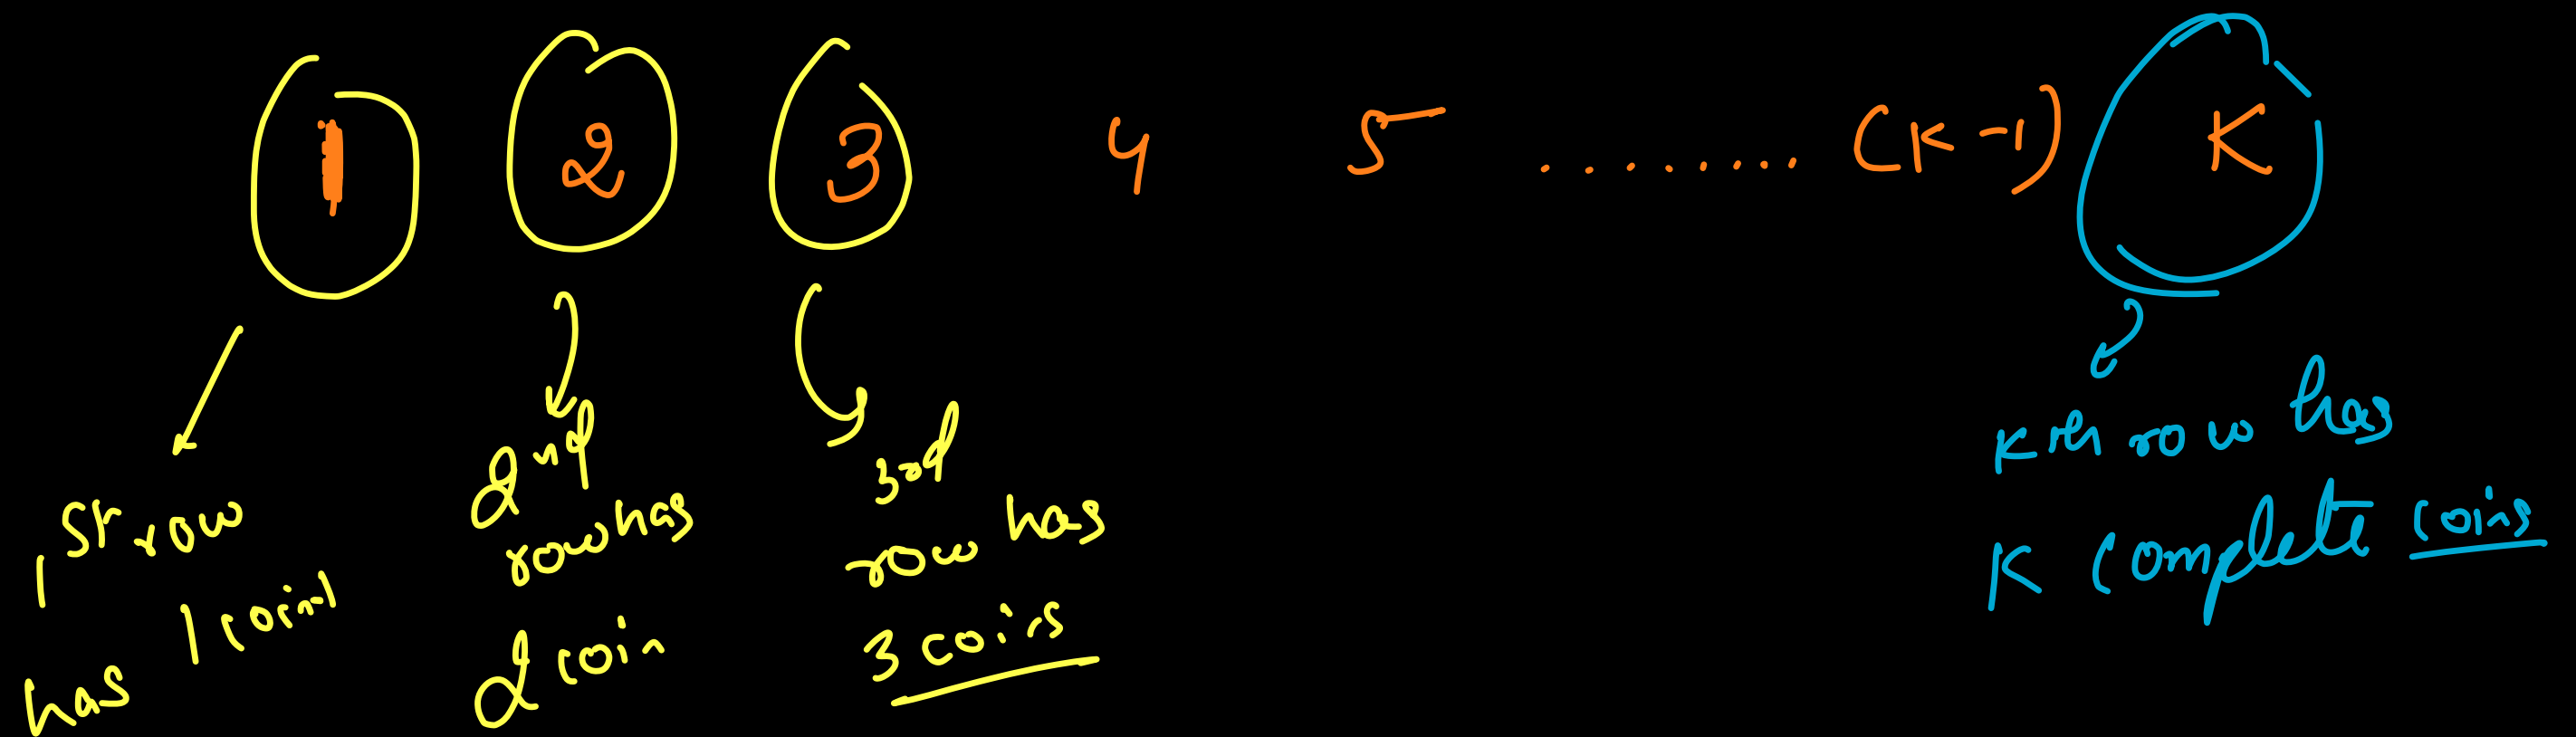

i^{th} row
of staircase

\rightarrow i coins

how many complete
rows we can make.

B.S on ans

C
C C
C C C
C C C C
⋮

Total coins $\rightarrow 1 + 2 + 3 + 4 + 5 + \dots + (K-1) + K$

Sum of first K natural no.

$$\frac{K(K+1)}{2}$$

to make K complete rows we need atleast these coins

Q. So $\frac{(k)(k+1)}{2}$ atleast coins are need to make k
complete rows.

total given coins $\rightarrow n$

$$\frac{k(k+1)}{2} \leq n$$

$$\underline{n=5}$$

$$k \rightarrow 1 \rightarrow \frac{(1)(1+1)}{2} \Rightarrow 1 \leq 5$$

$$k \rightarrow 2 \rightarrow \frac{(2)(2+1)}{2} \Rightarrow 3 \leq 5$$

$$k \rightarrow 3$$

$$\frac{(3)(3+1)}{2} \rightarrow 6 > 5$$

$$n = 8$$

\cap
 \cap
 \cap

$$k = 1$$

$$\rightarrow \frac{(1)(2)}{2} \rightarrow 1 < 8$$

$$k = 2$$

$$\rightarrow \frac{(2)(2+1)}{2} \rightarrow 3 < 8$$

$$k = 3$$

$$\rightarrow \frac{(3)(3+1)}{2} \rightarrow 6 \leq 8$$

$$k = 4$$

$$\rightarrow \frac{(4)(4+1)}{2} \rightarrow 10 > 8$$

we need to search for biggest value of k such that

$$\frac{(k)(k+1)}{2} \leq n$$

$$k \in [1, n]$$

search
space

$\swarrow l$
1

mid

potential val

Can we make mid no. of rows?

$$\frac{(mid)(mid+1)}{2} > n \rightarrow \text{cannot make } \underline{\text{mid rows}}$$

$\swarrow h$
 n

$$\frac{(mid)(mid+1)}{2} \leq n$$

yes

$$\text{value} = ((\text{mid}) (\text{mid} + 1)) / 2$$

$$(1 - n)$$

if (value <= n) {

$$\downarrow$$

$$\underline{\underline{O(\log n)}}$$

for each
cu

← ans = value;

lo = mid + 1

}

else {

hi = mid - 1

}

perfect sq \rightarrow $(\sqrt{\hat{x}})^2 \Rightarrow \wedge$

\downarrow
